                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to a composition-of-matter which comprises an antibody or antibody fragment or a multimeric form of an antibody or antibody fragment or a multimeric form of an antibody or antibody fragment including an antigen-binding region capable of of a pecifically binding an antigen-presenting portion of a complex composed of a human antigen-presenting molecule (APM) and an antigen derived from a pathogen. The invention is useful for the specific detection of the antigen-presenting portion of the complex and for diagnosing/treating various types of diseases associated with a pathogen infection by killing/damaging pathogen infected cells. The present sequence is a complementarity determining regions (CDR) of Fab light chain antibody specifically binding human leukocyte antigen (HLA-A2)/Tax11-19 complex. Tax11-19 is an antigen derived from Human T-lymphotropic virus I (HTLV-
                                                                                                                                                                                                                                                                                                                                                                                                                New composition-of-matter capable of specifically binding an antigen-
presenting molecule and a pathogen-derived antigen complexes, useful for
treating diseases associated with a pathogen.

The present sequence is that of complementarity determining region 2 (CDR2) of the light chain variable region of claimed mammalian antitumour necrosis factor (TNF) antibodies of the invention. The CDR is derived from a human TNF reactive IGG monoclonal antibody generated by cloning variable and constant region DNA in vector pC4 and expression in CTO cells. The invention provides isolated human, primate, rodent, mammalian, chimeric, humanized and/or CDR-grafted anti-TNF antibody compositions, uncleic acids immunoglobulins, their cleavage products, other specified portions and caring a host cell, transgenic animal or transgenic plant or plant cell, cand therapeutic compositions, methods for producing the antibodies using a host cell, transgenic animal or transgenic plant or plant cell, and therapeutic compositions, methods and devices. The antibody, nucleic acid, protein, composition and methods are useful for diagnosing or treating an anti-TNF related condition, eg. cancer, anorexia, cachexia, or an immune, cardiovascular, infectious, and/or neurological disease.
                                                                                      Human, Tumour necrosis factor; TNF; antibody;

                                                                                                                                                                                                                                                                                           The present invention relates to a mammalian anti-tumour necrosis factor (TNF) antibody capable of inhibiting binding of TNF alpha to TNF receptor. The invention is useful for diagnosing or treating an anti-TNF related condition in a cell, tissue, organ or animal and in immunotherapy. The invention is also useful for treating TNF related diseases chosen from obseity, immune related diseases uch as rehumatoid arthritis, cardiovascular disease such as stroke, malignant disease such as stroke, malignant disease such as stroke, malignant disease such as bacterial or viral infections such as hepatitis. The present sequence is the human anti-TNF antibody light chain complementarity determining

The invention relates to a novel method for characterising a viral infection in a host. The method comprises identifying at least one viral-based sequence element in a biological sample obtained from the host, characterising a homology profile of the viral-based sequence element with at least one endogenous host element and characterising the viral infection as a viral indicative of a viral behaviour of the viral infection in the homology profile; where the homology profile is indicative of a viral behaviour of the viral infection in the host. The method of the invention demonstrates viracide applications and may be useful for preparing a medicament for detecting and/or treating a viral infection or related condition, such as an autoimmune disease e.g. type in cryoglobulinaemia, or lymphoproliferative disorder. The viral infection may be useful for prayizidae, Herpesviridae, Papillomaviridae or connaviridae virus family. Treatment of the infection may utilise useful for detecting the presence of a virus in a biological sample or for manufacturing a medicament for treating SARS coronavirus (SARS-Cov) and/or Human T-lymphortopic virus 1 (HTV-I) infection. The methods are further useful for developing treatment regimes to target genotype-specific viral variants. The current sequence is that of a human
                                                                                                                                                                                                                                                                                                                                                                                                                      Characterizing a viral infection in a host, for developing treatment for severe acute respiratory syndrome-coronavirus (SARS-CoV), by determining homology profile of a viral-based sequence element with an endogenous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gapa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       monoclonal antibody; heavy chain variable region; light; framework; complementarity determining; CDR1; FR1; FR2; CDR2; FR3; CDR3; FR4; prostate specific membrane antigen; PSNA; cytostatic; tumour; colon cancer; renal carcinoma; gene therapy; human; L6.

                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                New isolated human monoclonal antibody comprising a human heavy chain and a human light chain variable regions, both comprising FR1, CDR1, FR2, CDR2, FR3, CRD3 and FR4 sequences, useful for treating or preventing
                                                                                                                                                                        The invention relates to a novel isolated human monoclonal antibody comprising a human heavy chain variable region and a human light chain variable region both comprising FR (framework region)-1, CDR (complementarity determining region)-1, FR2, CDR2, FR3, CRD3 and FR4 sequences. The antibody is directed against the human prostate specific membrane antigen (PSWA). The monoclonal antibody of the invention demonstrates cytostatic activity and may be useful for treating or preventing a disease characterised by the growth of tumour cells such as cancer, particularly prostate cancer, colon cancer or renal carcinoma, as well as duing gene therapy procedures. The current sequence is that of the human light chain L6 protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Making humanized antibody for converting antibody, by making chimeric antibodies containing complementarity determining region from non-human antibody and appropriate framework sequences of human antibodies.

The inversion describes a metricod of marking a humanisacid antibody, comparising making chimmeric antibodies containing a complementarity determining region (CDR) from a non-human antibody and appropriate (Eramework sequences (I) of human antibodies. (I) is selected by using canonical CDR structure types of non-human antibody in comparison to germline canonical CDR structure frome of human antibody in comparison to germline canonical CDR structure from such of humanisation. The method is useful for making a humanised antibody sequence of any subject species to a less converting a subject antibody sequence of any subject species to a less immunogenic form suitable for use in an object species. The method is reliable for identifying suitable human framework sequences to support on human CDR regions and to provide humanised antibodies that retain high antigen binding with low immunogenicity in humans, without the need for determining critically important amino acid residues in the framework, and without the need for multiple iteration and construction to obtain humanised antibodies with sultable therapeutic properties. The antibody has high affinity and low immunogenicity without need for comparing framework sequences between non-human antibodies. This sequence framework sequences between non-human antibodies. This sequence framework sequences between non-human and human antibodies. This sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Making humanized antibody for converting antibody, by making chimeric antibodies containing complementarity determining region from non-human antibody and appropriate framework sequences of human antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention describes a method of making a humanised antibody, comprising making chimeric antibodies containing a complementarity
invention describes a method of making a humanised antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human germline light chain variable region gene segment #33.

```
framework sequences (I) of human antibody and appropriate framework sequences (I) of human antibodies. (I) is selected by using canonical CDR structure types of non-human antibody in comparison to germline canonical CDR structure types of human antibody in comparison to germline canonical CDR structure types of human antibodies as the basis for selection, for humanisation. The method is useful for making a humanised antibody or a converted antibody. The method is applicable for converting a subject antibody sequence of any subject species to a less immunogenic form suitable for use in an object species. The method is reliable for identifying suitable human framework sequences to support on-human CDR regions and to provide humanised antibodies that retain high antigen binding with low immunogenicity in humans, without the need for determining critically important amino acid residues in the framework, and without the need for multiple iteration and construction to obtain humanised antibodies with suitable therapeutic properties. The antibody framework sequences between non-human and human antibodies. This sequence represents a human light chain variable region gene segment used in the creation of humanised antibodies
                                                                                                                                                                                                                                                                                                                                                                                                      ô

```

The present invention relates to a method for optimizing at least one physico-chemical property of an antibody by a computational screening method. The method comprises: receiving a template antibody structure; selecting at least one variable position belonging to the antibody structure; selecting at least one amino acid to be considered at the variable position(s); analyzing the interaction of each selected amino

```
hypsico-chemical property of an antibody by a computational screening method. The method comprises: receiving a template antibody structure; selecting at least one variable position belonging to the antibody structure; selecting at least one amino acid to be considered at the atribody structure; selecting at least one amino acid to be considered at the acid at each variable position with at least part of the remainder of the antibody, selected amino acid at each variable position with at least part of the remainder of the and identifying a set of at least one antibody sequence with at least one optimized physico-chemical property. The method is useful for optimizing the physico-chemical properties of an antibody, sespecially the stability, solubility, or antigen binding affinity. The optimized antibody may be useful for treating a patient. The present sequence is an antibody wariable region sequence used to illustrate the invention.
                                                                                                                                                                                                                                                           ö
acid at each variable position with at least part of the remainder of the antibody, including the selected amino acids at other variable positions, and identifying a set of at least one antibody sequence with at least one optimized physico-chemical property. The method is useful for optimizing the physico-chemical properties of an antibody, especially the stability, solubility, or antigen binding affinity. The optimized antibody may be useful for treating a patient. The present sequence is an antibody variable region sequence used to illustrate the invention.
                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to a method for optimizing at least

The method comprises: receiving a template antibody structure; selecting at least one variable position belonging to the antibody structure; selecting at least one amino acid to be considered at the variable position(s); analyzing the interaction of each selected amino acid at each variable position with at least part of the remainder of the antibody, including the selected amino acids at other variable positions; and identifying a set of at least one antibody sequence with at least one putimized physico-chemical property. The method is useful for optimizing toptimized physico-chemical properties of an antibody, especially the stability, solubility, or antigen binding affinity. The optimized antibody may be useful for treating a patient. The present sequence is an antibody way be variable region sequence used to illustrate the invention.
                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Computer optimization of physicochemical properties of antibodies comprises analyzing the interactions of amino acids at variable positions.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                        (without alignments)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 17, Application US/09535832A
Patent No. 6537769
GENERAL INFORMATION:
APPLICANT: Tilson, Martin David
TITLE OF INVENTION: With Abdominal Aortic Aneurysm (AAA) Disease, and
TITLE OF INVENTION: Diagnostic and Therapeutic use Thereof
FILE REFERENCE: 53862-A2
CURRENT APPLICATION NUMBER: US/09/535,832A
CURRENT FILING DATE: 2000-03-28
                                                                                                    Gaps
                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           33,

 Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
 December 14, 2005, 07:17:38 ; Search time 7.60345 Seconds (without alignments) 88.581 Million cell updates/sec

 Chu K.H., Wong S.H., Leung P.S.C.; "Tropomyosin is the major mollusc allergen: RT-PCR, expression and IgE
 reactivity.";
Submitted (DEC-1999) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Tropomyosin, in association with the troponin complex,
plays a central role in the calcium dependent regulation of muscle
 Bukaryota, Metazoa, Mollusca, Bivalvia, Pterlomorphia, Pectinoida,
Pectinoidea, Pectinidae, Mimachlamys.
NCBI TaxID=106276;
 SUBUNIT: Homodimer (By similarity).

DOMAIN: The molecule is in a coiled coil structure that is by 2 polypeptide chains. The sequence exhibits a prominent residues periodicity.

SIMILARITY: Belongs to the tropomyosin family.
 Mimachlamys nobilis (Noble scallop) (Chlamys nobilis).

The invention relates to an isolated mammalian anti-dual integrin antibody having at least one of the human heavy chain or light chain complementary determining region (CDR, HC CDR1-CDR3, LC CDR1-3). Also included are the nucleic acids encoding the CDRs, a vector comprising the nucleic acids, a host cell comprising the vector, an anti-idiotype antibody that binds to the anti-dual integrin, a medical device comprising the antibody that binds to the antibody by parenteral, subctuances, intravenous, intractionary, intractional, intractionary, intractions, intractionary, integrin related condition in an intentitie, gastic culcer, asthma, allergic rhinitis, Crohn's pathology, sickle cell anaemia, diabetes, cardiovascular disease such as anthonogy, arckle cell anaemia, diabetes, cardiovascular disease such as anterosclerosis, restenosis, angina pectoris, my viral, and fungal infections, pineumonia, leprosy, malaria, malignant disease such as leukaemia, chronic myelocytic leukaemia, Burkitt's
 Novel isolated mammalian anti-dual integrin antibody, useful for diagnosing or treating dual integrin related condition such as rheumatoid arthritis, gastric ulcer, asthma, atherosclerosis, restenosis.

The invention describes a monoclonal antibody (I) capable of neutralizing SARS-COV, binding to an epitope on a region of the spike protein of SARS-COV and neutralizing SARC-COV, or an servantibody (II) capable of neutralizing SARS-COV, binding to an epitope on a region of the spike neutralizing SARS-COV, binding to an epitope on a region of the spike or protein of SARS-COV, and the spike accompanient (III) and a carrier; a kit (IV) comprising (III) in one or more containers; a passive vaccine (V) against SARS-COV, comprising (III); comprising (I) and a carrier; a kit (IV) comprising (III) in one or more containers; a passive vaccine (V) against SARS-COV, comprising (III); containers; a passive vaccine (V) against SARS-COV, comprising (III); containers or careening (M2) for compounds that modulate the interaction between SARS-COV and the SARS-COV receptor ACE2; and enhancing (M3) the neutralization activity of MAD or SCFV 80K. (I) or (II) is useful for preventing a curronavirus-related disease or disorder. (I) is useful for treating a coronavirus-related disease or disorder. The coronavirus-clated disease or disorder. The coronavirus or clated disease or disorder is SARS. (I) is useful for detecting the presence of a coronavirus in a sample, which involves contacting the sample with (I), and detecting the presence of a coronavirus in a sample with coronaviru

 This sequence is that of complementarity determining region 3 (CDR3) of the light chain of an anti-tumour necrosis factor (TNF) antibody. The invertion provides isolated human, primact, rodent, mammalian, chimeric, humanised and/or CDR-grafted anti-TNF antibodies, immunoglobulins, cleavage products and other specified portions and variants, as well as anti-TNF antibody compositions, encoding or complementary nucleic acids, vectors, host cells, compositions, formulations, devices, transgenic animals, transgenic plants, and methods of making and using them. The antibody comprises at least a portion of an immunoglobulin molecule, especially the heavy chain and/or light chain variable regions given in AAMS1165-66, or either all of the CDRs of the heavy chain (see AAMS1158-60) or all of the CDRs of the light chain (see AAMS1151-63). antibody may inhibit TNF-induced cell adhesion molecules, inhibit TNF binding to receptor, or provide Arthritic Index improvement in a mouse model. It is useful for diagnosing or treating a TNF related condition in a cell, tissue, organ or animal (claimed) such as the archititis, gastric ulcer, asthma, allergic rhinitis, Crohn's pathology, sickle cell anemana, diabetes, a cardiovascular disease such as arteriosclerosis, atherosclerosis, restenosis, angina pectoris or myocardial infarction, an infectious disease in a cell auch as bacterial, viral, and fungal infections, pneumonia, leprosy and malaria, a malignant disease such as leukaemia, chronic myelocytic leukaemia, a malignant disease such as myeloma, or a neurological disease such as multiple sclerosis, parkinson's disease, spinal ataxia, Alzheimer's disease and Creutzfeldt-
 The present sequence is that of complementarity determining region 3 (DTR3) of the light chain variable region of claimed mammalian antitumour necrosis factor (TTP) antibodies of the invention. The CDR is derived from a human TNF reactive igo monoclonal antibody generated by cloning variable and constant region DNA in vector pC4 and expression in CHO cells. The invention provides isolated human, primate, rodent, mammalian, chimeric, humanized and/or CDR-grafted anti-TWR antibodies, immunoglobulins, their cleavage products, other specified portions and variants, as well as anti-TNR antibody compositions, uncleic acids encoding these, vectors, host cells, methods for producing the antibodies using a host cell, transgenic animal or transgenic plant or plant cell,

 This invention relates to novel antibody and antigen-binding fragments of antibodies that bind alphaE-beta7 integrin chains (CD103). Specifically, it refers to the binding of activation induced epitopes present on activated alphaE integrins, where these integrins are activated by exposure to divalent cations (e.g. Mn2+), to phorbol esters or suitable growth factors and/ or mitogens. The present invention describes the alphaE-beta7 integrin as a homing receptor that mediates lymphocyte migration to mucosal epithelium. As such, compositions of this invention such as treating a subject having an inflammatory bowel disease such as sethma and chronic bronchitis. Furthermore, such

This invention relates to novel antibody and antigen-binding fragments of antibodies that bind alphaE-beta7 integrin chains (CD103). Specifically, it refers to the binding of activation induced epitopes present on activated alphaE integrins, where these integrins are activated by exposure to divalent cations (e.g. Mn2+), to phorbol esters or suitable growth factors and/or mitogens. The present invention describes the alphaE-beta7 integrin as a homing receptor that mediates lymphocyte

Novel antibody which binds activated alpha-E integrin, specifically to activation-induced epitope on integrin alpha-E chain (CD103), useful for treating inflammatory bowel diseases e.g., Crohn's disease, gastroenteritis.

WPI; 2004-178738/17.

Claim 12; SEQ ID NO 22; 67pp; English.

```
The invention describes an isolated binding member comprising at least one binding domain capable of specifically binding Streptococcus preumoniaes surface adhesin A (BBAA) protein, the binding domain having a dissociation constant Kd for PBAA which is less than 1 x10 -6 M. Also described are: an isolated nucleic acid molecule encoding at least a part of the binding member described above, a vector comprising the nucleic acid molecule of (1); a host cell comprising the nucleic acid molecule of (1); a cell line engineered to express the binding member described above (1); a cell line engineered to express the binding member described above (1); a cell an individual; a kit comprising at least one binding member described above, the antibody being labeled; and a pharmaceutical composition comprising at least one binding member is useful for producing a pharmaceutical composition for the treatment of Pneumococcus infection. The binding member, methods and composition are useful for treating or preventing an individual suffering

pharmaceutical composition comparising the above protein and a pharmaceutical carrier, methods of modulating angiogenesis or endothelial cell activity in the subject and methods for detecting the presence of a Tiel protein, in a sample. The composition and methods are useful for diagnosing, preventing or treating angiogenesis-related disorders (e.g. cancer) or inflammatory disorders, such as rheumatoid arthritis or psoriasis. These may also be used in drug screening procedures. The present sequence represents the light chain variable region of an
 virucide, respiratory-gen., vaccine, monoclonal antibody, antibody production, diagnosis, therapeutic, gevere acute respiratory syndrome, sars coronavirus infection, antiviral, respiratory disease, infection, single chain antibody; 80R; light chain vraiable region.
 The invention relates to an isolated protein that binds to Tiel (receptor tyrosine kinase) ectodomain. The protein comprises heavy and light chain immunoglobulin variable domain sequences. Also included an isolated nucleic acid comprising a coding sequence that encodes a polypeptide comprising an immunoglobulin heavy chain (HC) or light chain (LC) variable domain sequence (where the coding sequence is at least 85% identical to a reference sequence that encodes the HC variable domain of clone E3, G2, p-A1, p-A10, p-B1, p-B3, p-C6, p-D12, p-F3, p-F4, p-G3, s-A10, s-H4, or the coding sequence hybridizes to the reference sequence or its complement), a host cell that contains the nucleic acid nucleic acid, a pharmaceutical composition comprising the above protein and a
 New isolated proteins comprising heavy and light chain immunoglobulin variable domain sequences and that bind to Tiel ectodomain, useful for diagnosing, preventing or treating angiogenesis-related disorders or inflammation.
 present sequence represents the light chain variable region antibody that binds to human receptor tyrosine kinase Tie 1.

The present invention describes a method (M1) for amplifying a nucleic acid strand. M1 comprises providing an engineered nucleic acid strand (S) acid strand. M1 comprises providing an engineered nucleic acid strand (S) having a predetermined sequence at one and a sequence complementary complementary to the predetermined sequence in the presence of a polymers and nucleotides under conditions suitable for polymerisation of the complementary complementary complements and nucleotides. Mso described is an engineered undelecated at rand (I) having a predetermined sequence at one end and a sequence complementary complementary. May be used to produce and the other end. M1 is useful for the predetermined sequence at the other end. M1 is useful for lighted products that can be used to protein encoded by the target sequence. M1 is useful to amplify a family complementary. M1 is useful not only for produce the polypeptide or protein encoded by the target sequence. M1 is useful to amplify a family complete acid sequence, but also for amplifying simultaneously complement arget nucleic acid sequence. Dicated on the same confiferent nucleic acid sequence. Dicated on the same confiferent nucleic acid sequence acid sequence of acid sequence of acid sequence of acid sequence of the present sequence.

The invention describes a method of amplifying a nucleic acid encoding a portion of an antibody, involving annealing a primer to a template that encoded encoded a portion of the antibody, synthesizing a polynucleotide that is complementary to the portion of the template, separating the synthesized polynucleotide, annealing a template oligonucleotide to the synthesized polynucleotide, extending the synthesized polynucleotide and amplifying the polynucleotide. Also described are: producing (M2) an antibody contacting the diverse population of the polynucleotide. Also described are: producing (M2) an antibody a portion of an IgA antibody, contacting the diverse population of templates with a primer, which has a first portion which anneals to the templates with a primer, which has a first portion which anneals to the templates with a primer, which has a first portion of templates not anneal to the templates, and carrying out steps (b)-(f) of (M1); a numbal to the templates, and carrying out steps (b)-(f) of (M1); a contacting the library of IgA antibodies by (M2), and screening the library to identify one or more IgA antibodies by (M3). (M1) is useful for indentifying an antibody an antibody an antibody an antibody library. (M2) is useful for identifying an antibody having a desired binding specificity.

CM1) enables an improved nucleic acid amplification with decreased miscottion of antibody and an antibody having a desired binding specificity. Then the target sequence. This is the amino acid sequences other than the target sequence. This is the amino acid sequence of an IgG kappa light chain variable.

The present sequence is that of the light chain variable region of an anti-tumour necrosis factor (TNF) antibody of the invention. The invention provides isolated human, primate, rodent, mammalian, chimeric, humanised and/or complementarity determining region (CDR)-grafted anti-tumour necrosis facilities and complementarity determining region (CDR)-grafted anti-tumour and variants, as well as anti-TNF antibody compositions, formulations, devices, transgenic animals, transgenic compositions, formulations, devices, transgenic animals, transgenic plants, and methods of making and using them. The anti-TNF antibody compositions, formulations of an immunoglobulin molecule, especially the present sequence, or either all of the CDRs of the heavy chain in the present sequence, or either all of the CDRs of the heavy chain (see AAMS1158-60) or all of the CDRs of the light chain (see AAMS1161-65). The antibody may inhibit TNF-induced cell adhesion molecules, inhibit TNF binding to receptor, or provide Arthritic Index improvement in a mouse model. It is useful for diagnosing or treating a TNF related condition in a cell, tissue, organ or animal (claimed) such as rheumatoid arthritis, gastric ulcer, asthma, allergic rhinitis, Crohn's pathology, sickle cell anaemia, diabetes, a cardiovascular disease such as a leukaemia, chronic wiesense in a cell such as bacterial, viral, and fungal infections, pneumonia, leprosy and malaria, a malignant disease such as leukaemia, chronic weleosese in a cell such as multiple myeloma and multiple myelomy or a neurological disease such as multiple selences. Spinal ataxia, Alzheimer's disease and creuzfeldt-Jakob disease.
 Novel isolated mammalian anti-tumor necrosis factor antibody, useful for treating sickle cell anemia, diabetes, atherosclerosis, restenosis, angina pectoris, myocardial infarction, leprosy.

Example 3; Fig 5; 131pp; English.

The present sequence is that of a human Vg/38K-type light chain variable region encoded by a human germline gene in a transgenic mouse used in human monoclonal antibody (mab) construction. A GermYv fusion was performed using spleen cells from a hybrid mouse containing human pronoclonal antibody transgenes that was immunised with recombinant human tumour necrosis factor (TNF) alpha. Human mabs were obtained that bound immobilised human TNF alpha with apparently high avidity. These mabs had a totally human 1961, kappa isotype. The mature portion of the light chain variable region of 2 of the mabs, TNV14 and TNV15, were identical (see AAM51174) to the present sequence, while the complementarity determining region (CDR) grafted anti-TNF antibodies human, primate, rodent, mammalian, chimaric, humanised and/or complementarity determining region (CDR) grafted anti-TNF antibodies artibody compositions, and cleavage products and variants, as well as anti-TNF antibodies, caribody compositions, and cleavage products and variants, as well as anti-TNF compositions, and methods of making and using them The anti-TNF cost cells, compositions, formulations, the margable regions given in the present sequence and in AAM5116, or either all of the CDRs of the present sequence and in AAM5116, or either all of the CDRs of the present sequence and in AAM5116, or either all of the CDRs of the molecules, inhibit TNF binding to receptor, or provide Arthritis, gastric uleer, astimma, and claims or animal (claims) arthritis, gastric uleer, astimma, and and such as an improvement in a mouse model. They are useful for diagnosing or treating a TNF related condition in a cell, tissue, organ or animal (crohn's pathology, sickle cell anemia, diabetes, a cardiovascular disease such as arteriosclerosis, atherosclerosis, restenosis, and tungal infections, pneumonial, leprosy and malaria, a malignant disease such as multiple myeloms, or a neurological customer. The letteral such as multiple sclatosis, pneumonial disease such as multiple delections,

 This invention relates to novel mammalian CDR mimetibodies, specific portions or variants thereof. Specifically, it refers to an antibody fragment where a protein has been inserted into, or replaces a portion of, one or more CDR regions, such that each CDR mimetibody comprises at least one portion of a heavy chain or light chain variable region, which itself comprises at least one human framework region and at least one ligand binding region (LBR). The present invention describes human mimetibodies, including modified immunoglobulins and cleavage products
 that can be useful in gene therapy and the generation of transgenic plants and animals. Furthermore, the CDR mimetibody is useful for preparing compositions for modulating, treating or reducing the symptoms of immune, cardiovascular, infectious, malignant and/ or neurologic diseases, as well as anaemia. Accordingly, they exhibit immunomodulator, cardiant, antimicrobial, cytostatic and neuroprotective activities. This polypeptide sequence is an erythropoietin light chain mimetibody of the

 The invention describes an isolated binding member comprising at least one binding domain capable of specifically binding Streptococcus pneumoniae surface adhesin A (PasA) protein, the binding domain having a dissociation constant Kd for PasA which is less than 1 x10 ·6 M. Also described are: an isolated nucleic acid molecule encoding at least a part of the binding member described above; a vector comprising the nucleic acid molecule of (1); a host cell comprising the nucleic acid molecule of (1); a cell line engineered to express the binding member described above; detecting or disgnosing a disease or disorder associated with Pneumococcus in an individual; a kit comprising at least one binding member described above, the antibody being labeled; and a pharmaceutical composition comprising at least one binding member described above. The binding member is useful for producing a pharmaceutical composition for
diseases such as asthma and chronic bronchitis. Furthermore, such compositions can be used for inhibiting graft rejection, psoriasis, eczema, urticaria, scleroderma, autoimmune diseases such as multiple sclerosis, diabetes, glomerulonephritis, uroimmune thyroiditis, Behcet's syndrome, viral infections, cancer and/or neoplastic diseases such as antiasthmatic, immunosuppressive, antiporiatic, dermatological, neuroprotective, antidiabetic, nephrotropic, virucide, cytostatic and vasotropic activities. This polypetide sequence is a human antibody that binds the integrin alphaE chain of the invention.

 New protein comprising an immunoglobulin heavy chain variable (VH) domain and an immunoglobulin light chain variable (VL) domain, useful for preparing a composition for treating or preventing a cancerous disorder.
 The present invention describes a protein comprising an immunoglobulin (Ig) heavy chain variable (VH) domain and an Ig light chain variable (VL) domain. The protein binds a complex comprising a major histocompatibility complex (MHC) and a peptide, does not substantially bind the MHC in the absence of the bound peptide, and does not substantially bind the peptide in the absence of the MHC. The peptide is a peptide fragment of gpl00, MUC1, TAX or hTERT. Also described: (1) a pharmaceutical composition
psoriamis, lichen planus), autoimmune thyroid disease (e.g., Graves' disease, Hashimoto's thyroiditis), Sjogren's syndrome, pulmonary inflammation (e.g., asthma, chronic obstructive pulmonary disease, pulmonary sarcoidosis, lymphocytic alveolitis), transplant rejection, spinal cord injury, brain injury (e.g., stroke), neurodegenerative diseases (e.g., Alzheimer's disease, Parkinson's disease), gingivitis, gene therapy-induced inflammation, diseases of angiogenesis, inflammatory kidney disease (e.g., IgA nephropathy, membranoproliferative glomerulonephritis, rapidly progressive glomerulonephritis), or atherosclerosis. It is also useful for treating a viral or bacterial infection involving unwanted IP-10 activity in a subject, where the viral infection is mediated by HIV, HCV, HSV-1 or SARS virus. The present sequence represents the amino acid sequence of a human IPIO monoclonal antibody light chain variable region.

This invention relates to novel mammalian CDR mimetibodies, specific fragment where a protein has been inserted into, or replaces a portion of fragment where a protein has been inserted into, or replaces a portion of of one or more CDR regions, such that each CDR mimetibody comprises at least one portion of a heavy chain or light chain variable region, which itself comprises at least one human framework region and at least one ligand binding region (LBR). The present invention describes human mimetibodies, including modified immunoglobulins and cleavage products that can be useful in gene therapy and the generation of transgenic plants and animals. Furthermore, the CDR mimetibody is useful for preparing compositions for modulating, treating or reducing the symptoms of immune, cardiovascular, infectious, malignant and/ or neurologic of immune, cardiovascular, infectious, malignant and/ or neurologic cardiant, antimicrobial, cycostafingly, they exhibit immunomodulator, cardiant, antimicrobial, cycostafic and neuroprotective activities. The present sequence is care, a miniman anti-interrection, troughous, type. (II-IRI) monoclonal antibody (MAA) 26F5 kappa chain variable region. Human MAbs to IL-IRI were prepared using the HCO7 strain of transgenic mice, which expresses human antibody genes. These mice were immunised with purified recombinant IL-IRI, and splencytes from immunised mice were fused to a mouse myeloma cell line to generate hybridomas.

Whyridomas which serred a MAb that bound with high avidity to IL-IRI were selected. The MAbs inhibit IL-I signalling by competing with IL-IRI were selected. The MAbs inhibit IL-I signalling by competing with IL-IRI and and IL-Ialpha binding to IL-IR. These MAbs, as well as single chain of Table of the michodies in the single chain for antibodies in might of IL-IRI is an established diseases or for detecting the amount of IL-IRI in a sample. IL-I mediated diseases or for detecting the amount of IL-IRI in a sample. IL-I mediated diseases include acute pancreatitis, amyotrophic lateral schemarished and theory associated illnesses, cardexia, anorexia, asthma, cancer including clerkating associated illnesses, coronary conditions, cancer including clerkating in the uncour metastasis, diabetes, endometricals; fever, fibromyalgia, glomerulonephritis, graft versus host disease, corester in series of including impairment, lung disease, minimally Kawasaki's disease, learning impairment, lung diseases, minimals in series of learning impairment, lung diseases, minimals minimals in series of learning impairment, lung diseases, minimals minimals minimals minimals manuals and series of learning impairment, lung diseases, minimals minimals.

```
CC light chain variable region is identical to that of the Vg/38-type light chain germline sequence (see AAM51173). The light chain variable regions of 2 other human mabs (see AAM51175) show a single amino acid difference. The invention provides human, primate, mammalian, rodent, chimeric, humanised and/or complementarity determining region (CDR) grafted anti-CR antibody compositions, as well as anti-TWF antibody. Gencins, formulations, devices, transgenic animals, transgenic compositions, formulations devices, transgenic animals, transgenic plants, and methods of making and using them. The anti-TWF antibody compositions, formulations of an immunoglobulin molecule, especially compositions, formulations of an immunoglobulin molecule, especially comprises at least a portion of an immunoglobulin molecule, especially the heavy chain and/or light chain variable regions given in the present sequence and in AAM51165, or either all of the CDRs of the heavy chain (see AAM51186 of) or all of the CDRs of the input chain (see AAM51161 or ecceptor, or provide Arthritic Index improvement of an amouse model. They are useful for disgnosing or treating a TDF related condition in a cecli, tissue, organ or animal (claimed) such as the anteriosclerosis, archivesclerosis, and infections disease in a cardiovascular disease such as a leukaemia, diabetes, a cardiovascular disease such as leukaemia, chord myelocytic leukaemia, Burkitt's cyral, and fungal infections, pneumonia, leprosy and malaria, a malignant complement of an enuclogical leukaemia, Burkitt's creutzfeldt-Jakob disease, spinal ataxia, Alzheimer's disease and constructed and sease and an enucloped sease spinal ataxia, and place and constructed the condition or an enuclogical leukaemia, mand and an enuclose spinal ataxia, and place and multiple myelocytic leukaemia, and sease and an enuclose and an enuclose and an enuclosical and an enuclose and an enuclose and an enuclose and an enuclose and an enuclose and an enuclose and an enuclose and an enuclose and an enuclose and a
